TITLE : INTERACTIVE SYSTEM

ABSTRACT : PURPOSE: To give a feeling as if an interaction with a main is executed as possible by generating a random number according to the number of an interaction number part to indicate the number of interaction groups composed of two abnormal interactive sentences having the same meaning and different expression to a random selecting part, selecting the interactive sentence according to the random number from the interaction groups and outputting it.

CONSTITUTION: By the confirmation result of a voice as the instructions of the equipment confirmation, control, etc., of a user, the interaction of the next inquiry is decided. To the interaction of the inquiry, the random number is generated by a random selecting part 13 according to the number of an interaction kind number part 12 to indicate the number of interaction groups 11 to collect interactive sentences or phrases having the same meaning and different expression, the interactive sentence or phrase according to the random number is selected from the interaction groups 11, and the voice file is synthesized as a response voice. By changing the response from a machine at random in such a way, a natural feeling as if the interaction with the man is executed as possible though an opponent is the machine from the position of the user can be given.
